TECHNOLOGY

SCOTT GARMENTS ENGINEERED WITH GORE-TEX® PRODUCTS ARE DURABLE WATERPROOF, WINDPROOF AND HIGHLY BREATHABLE.

GORE-TEX® products are created by laminating the GORE-TEX® membrane to high-performance textiles. In order to guarantee a waterproof product, the seams on the entire garment are sealed with Gore-Seam® tape technology.

GORE-TEX® Performance Shell with Z-Liner

- + Provides breathable comfort and durably waterproof and windproof protection.
- + A specific GORE-TEX® membrane is freely suspended between the outer material and the lining of the jacket.
- + It can easily be combined with thermal insulating lining materials ideal for fashion applications.
- + Ideal for fashion applications.

A PROMISE FOR YOUR RIDE

Triphase (TP) is a climate control technology based on a PU (polyurethane) membrane developed exclusively by Scott Sports. The construction offers a high level of breathability while also keeping a rider's body climate comfortable by managing outside elements that he or she might encounter. Windproof and waterproof features protect in all weather conditions while breathable aspects allow moisture and vapor to escape to maintain the highest level of comfort.

According to Scott requirements, the 3layer and Z-liner construction is tested under extreme conditions before being approved for use in Scott Motorsports products.

TECHNOLOGY

CORDURA® fabrics are exceptionally durable and regarded as “best-in-class”. The material has to pass stringent test criteria before earning the CORDURA® brand name, but once awarded, a CORDURA® product is guaranteed to be durable, versatile, and reliable.

SCOTT CONNECTION ZIPPER

The Connection Zipper is the essential link between the jacket and pants. Scott only uses high quality YKK Connection Zippers which are standardized according to Scott standards. In case of a crash, this zipper protects the rider by keeping the connection strongly sealed, and also keeps out wind and rain in everyday riding. All Scott styles can be combined.

SAS-TEC

body protection systems

SAS-TEC experts have years of experience with shock absorbing systems. The systems have passed all of Scott’s requirements and have significantly outperformed the benchmark for all joint and back protectors in the European Market, known as the CE Standards.

3D-Protector from visco elastic soft foam with outstanding shock absorption values: Residual force according to EN 1621-2 under 9KN (limit Level 2: 9KN). Anatomically perfectly adapted and barely noticeable. High-end engineering for greater performance.

Features:

- + Reusable after impact
- + Washable
- + High Absorbability
- + Lightweight

PROTECTORS

SCOTT NECK BRACE STREET

Neck injuries can be of the most serious upper body injuries in motorcycle road accidents. The SCOTT NECK BRACE STREET was engineered in collaboration with Leatt®, the market leader and pioneer of the “helmet for your neck”. The all-new neck brace for street motorcycle riders forms an essential part of your personal safety system.

It functions in conjunction with your helmet and is designed to help protect your neck from extreme movements and overall neck loading in the event of an accident.

The SCOTT NECK BRACE STREET is engineered with Leatt®’s proven Alternative Load Path Technology™ (ALPT™) and features seamless integration of function, movement and looks for street motorcycle riding, on the road or at the track.

TECHNOLOGY NECKBRACE

ALPT: ALTERNATIVE LOAD PATH TECHNOLOGY.

All Scott-Braces help protect riders from 5 types of head/neck impacts by employing Alternative Load Path Technology™. This innovation helps disperse the energy, typically transferred to the neck, resulting from an impact to the head* and assists in the transferring of forces away from the vulnerable neck structures to less vulnerable areas of the body and is pivotal in the design of all Scott-Braces.

In a typical face-plant type accident without a Scott-Brace, the force of the impact is transferred from the ground to the helmet, through the helmet to the skull and skull base where it is then transferred through the neck to the back (thoracic spine). With the Scott-Brace fitted, the force will instead transfer from the ground to the helmet, through the helmet onto the Scott-Brace once contact is made, some of the force will therefore be transferred to the brace and dispersed to the less vulnerable parts of the torso. If the impact is significant enough, the brace is designed to fail in crumple zones (similar to those seen in cars), thereby helping to absorb some of the energy of the impact.

THE SCOTT-BRACE HELPS PROTECT AGAINST THE FOLLOWING MAIN SCENARIOS:

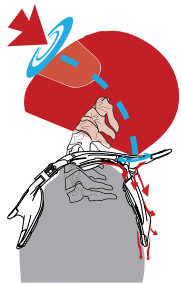

Hyperextension: Extreme bending of the head in a rearward direction.

Hyperflexion: Extreme bending of the head in a forward direction.

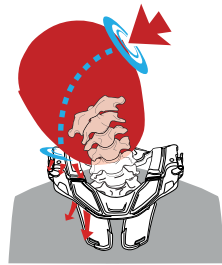

Lateral Hyperflexion: Extreme bending of the head to one side

Posterior Hypertranslation: Movement of the head relative to the neck, at ninety degrees to the neck.

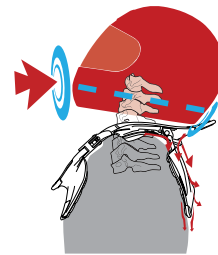

Coupled Axial Loading: Helps prevent axial loading only when the axial forces act in combination with other mechanisms. As an example, this typically occurs when your head is forced downward and forward (Hyperflexion) or downward and backward (Hyperextension).

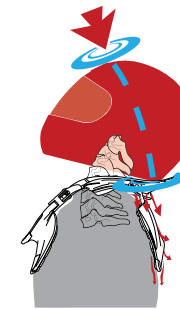

HYPEREXTENSION:
over-bending of the head in rearward direction.

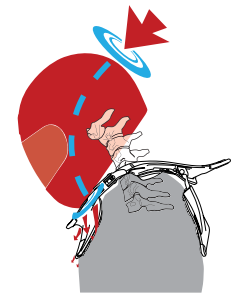

LATERAL HYPERFLEXION:
over-bending of the head to one side.

POSTERIOR HYPERTRANSLATION:
extreme movement of head and helmet, rearward on the neck.

COUPLED AXIAL LOADING:
Helps prevent axial loading only when the axial forces act in combination with other mechanisms.

HYPERFLEXION:
over-bending of the head in forward direction.

SCOTT NECK BRACE STREET

223739

MATERIAL

+ Fiberglass reinforced polyamide resin construction

FEATURES

- + CE certified according to Personal Protective Equipment Directive 89/686/EEC
- + Anatomically Design
- + Increases level of rider safety
- + For all types of street riders
- + Works with most full-face helmets, including flip-up helmets
- + Fits most types of riding jackets and leather suits, with or without aero humps
- + Designed to be worn over the jacket or suit
- + Designed for optimal riding position and maximum range of movement
- + Unique adjustable scapula Wing designed to accommodate an aero hump or back protector
- + Foldable for easy storage
- + No-tool scapula wing adjustment
- + Jacket Zipper Relief area
- + Collarbone Cut-out
- + Red opening hinges for easy access and identification by paramedic staff
- + Adjustable body strap system for a secure fit
- + Adjustable sizing to fit most riders
- + Comes with all tools for size adjustment

TECHNOLOGY SOFT

HOW DOES D3O™ MATERIAL WORK?

d3o™ is a patented material with intelligent molecules. It flows with you as you move but locks together on impact to absorb energy and protect you.

This unique innovative component provides an optimal freedom of movement and surpasses CE standards.

INCREASED COMFORT AND MOBILITY.

At only 11mm thick, d3o™ back protection is low profile, lightweight, flexible and soft.

d3o™ protectors allow for complete freedom of movement and mold to your body so you will not even feel like you are wearing a back protector.

SCOTT SPECIFIC DESIGN

SCOTT CR Back Protectors feature SCOTT's unique 3D mesh back that increases breathability. The adjustable belt helps you customize the fit.
