NO SHORTCUTS

NO SHORTCUTS

NO SHORTCUTS

Like the modest champion sitting in the corner listening as others spit their egos all over each other, SCOTT quietly lets its achievements, its victories, its skills speak for themselves. We don't make products for those who yearn to be noticed. We make them for those who are going to do what they do whether there's anyone watching or not.

If you're like us, you say what you say, do what you do, ride where you ride because you love it. You do it the right way. You do it for the right reasons.

SCOTT FRAME TECHNOLOGIES

FRAME VENTILATIONS

ALL-AROUND VENTILATION

Frame Ventilation is optimized around the entire frame in order to channel air flow onto the lens, as opposed to the eyes. This technology blocks snow and water from entering the goggle.

HELMET COMPATIBILITY

SILICONE LINE

An adhered silicone strip on the inside of the goggle strap ensures the goggles stay right where they should on a helmet or hat.

INTEGRATED DESIGN

SCOTT goggles are engineered to engage flawlessly with a variety of helmets, including SCOTT's entire helmet line.

FACEMASK

Designed for harsh weather conditions SCOTT snowmobile goggles include facemasks that provide additional protection from the wind and cold.

PIVOTING OUTRIGGERS

The Prospect has two pivoting outriggers that adapt to any helmet shape and size. The resulting pressure created by the goggle on the rider's face provides a complete and consistent seal.

COMFORT

NO SWEAT FACE FOAM

The No Sweat Face Foam consists of a microfiber layer which is extremely water absorbing. It soaks up moisture super fast and avoids sweat getting into your eyes or inside the goggle.

BIG 3-LAYER MOLDED FACE FOAM

SCOTT's premium large face foam does not only feature two layers of foam and one layer of fleece for ultimate fit and comfort, but also has pre-shaped nose foam to avoid any pressure points in this critical area.

BIG TWO-LAYER MOLDED FACE FOAM

This large, two-layer open celled face foam with fleece has excellent moisture absorbing and thermal properties, guaranteeing that you stay warm, dry, and comfortable all day.

BIG SINGLE-LAYER FACE FOAM

Thanks to the large, soft, single density face foam, a precise fit around facial features is provided while sealing out the elements.

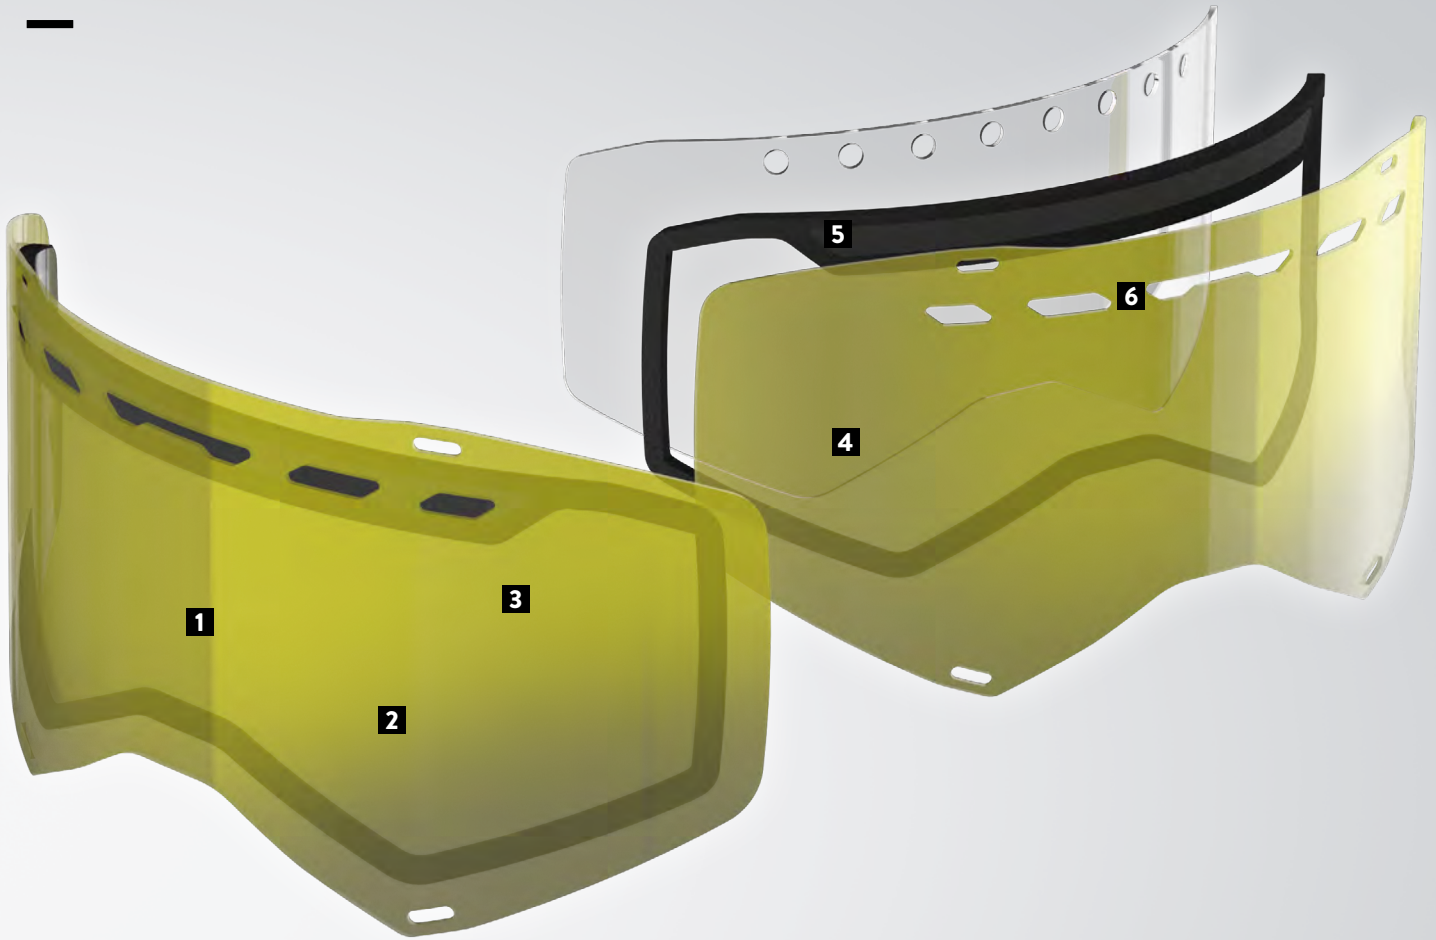

LENS RETENTION

LENS LOCK SYSTEM

The innovative lens lock system features 4 locking pins that go through the lens instead of grabbing it from the top. Like this the lens stays in the frame no matter what.

SCOTT LENS TECHNOLOGIES

LENS SHAPES

1. CYLINDRICAL LENS

Cylindrical lenses curve from left to right, and are flat from top to bottom. These are low profile, flexible, and offer a unique look.

EXTERNAL COATINGS

2. HARD COATING

SCOTT hard coating creates a permanent bond with the lens that reduces the appearance of hairline scratches and provides overall lens durability.

3. CHROME COATING

SCOTT chrome coating offers unmatched style for your goggles while controlling light transmittance.

FOG RESISTANCE

4. ANTIFOG COATING

SCOTT lenses undergo a permanent NoFog™ treatment process to prevent condensation and fogging.

5. SPACER FOAM AND DOUBLE LENSES

Spacer Foam and Double Lenses block moisture and eliminate fogging, while allowing for optimal breathability.

6. AIR CONTROL SYSTEM (ACS)

ACS ventilation incorporates lens air intake vents on the goggle lens and frame air outtake vents on the bottom of the goggle.

OUTER LENS TECHNOLOGIES

SCOTT OPTIVIEW

These European manufactured lenses are made of polycarbonate (material,) ensuring comfort and high-impact resistance. SCOTT's proprietary injection molding process and hard coat treatment guarantees that every OptiView lens is optically correct and distortion free. SCOTT OptiView lenses are available as spherical or cylindrical.

SCOTT TRUVIEW

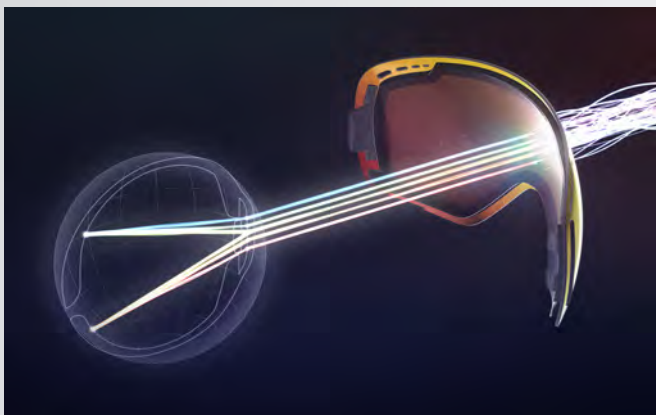

These European manufactured lenses are made of extruded and thermoformed sheets of selected celluloses (CA/CP/PC). TruView lenses pass SCOTT's strict testing procedures delivering high quality, performance lenses. SCOTT TruView lenses are available as cylindrical double or single lens.

SCOTT AMPLIFIER LENS TECHNOLOGY

20 YEARS AGO, AN ENGINEER NAMED BOB YOUMANS, INVENTED THE IMPRESSIVE AND INDUSTRY LEADING AMPLIFIER LENS TECHNOLOGY. THIS TECHNOLOGY REVOLUTIONIZED OUTDOOR SPORTS IN FLAT LIGHT CONDITIONS AND IS TODAY FULLY INTEGRATED INTO EVERY SCOTT GOGGLE LENS.

AMPLIFYING THE LIGHT YOU NEED AND BLOCKING THE LIGHT YOU DON'T

Basically, by tuning the curve we amplify the light you need and block the light you don't. With this we enhance more contrast and clarity for the human eye.

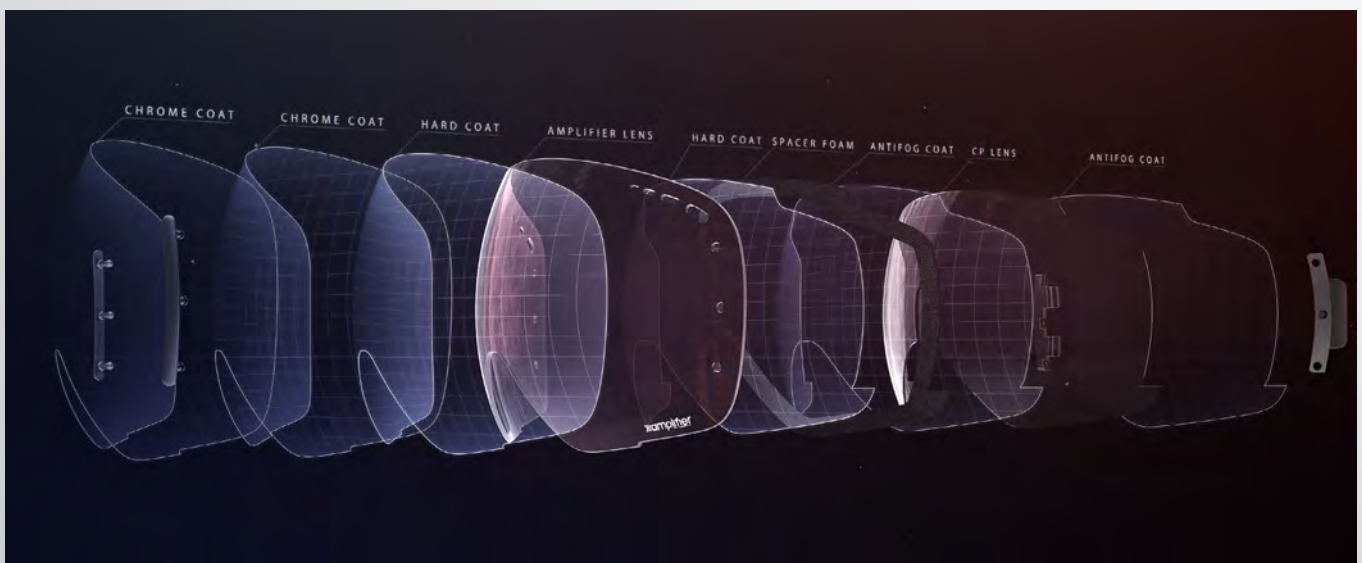

OPTIMIZING THE LIGHT RANGE

The AMPLIFIER Technology optimizes the transmission of three specific wavelengths – Blue light, Orange light and Red Light. These ranges of light are the most important for the human eye to enhance contrast and clarity.

LENS CONSTRUCTION

Amplifier Technology is fully integrated into SCOTT's very own PC lens. Part of a total of 9 layers, the Amplifier goggle lens is unique and will give you a perfect view while riding.

SCOTT LENS OPTIONS

EACH CATEGORY OF LENS COMES WITH SCOTT'S PROPRIETARY CONTRAST ENHANCING LENS TECHNOLOGY: AMPLIFIER.

LIGHT SENSITIVE

CAT. S2-3 ☁️❄️ CAT. S1-3 ☀️☁️

ADAPTS THE SHADE OF THE LENS TO GET THE BEST CONTRAST FOR EVERY LIGHT CONDITION
 SCOTT's Light Sensitive lenses engage photo-chromic technology and adapts automatically to sunlight intensity. These lenses react to light changes and within seconds the lens will either darken when the brightness gets stronger or lighten when the sunlight gets weaker. SCOTT's Light Sensitive innovative lens construction guarantees no influence from cold temperatures on the photochromic efficiency.

ILLUMINATOR

CAT. S1 ☁️

INTENSIFIES DEFINITION IN FLAT LIGHT CONDITIONS

The SCOTT Illuminator lens has been developed to let almost 90% of yellow and orange wave lengths pass the lens and emphasize the brightness perception, while shutting out the bad light to maintain a very good level of contrast and depth of perception.

ENHANCER

CAT. S2 ☁️

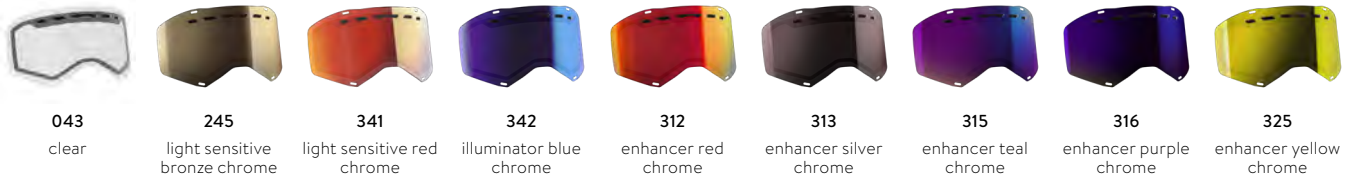

ENHANCES CONTRAST IN OVERCAST AND MIXED CONDITIONS

When riding in mixed and overcast light conditions, the enhancer lens has the perfect tint. Letting in slightly more light than the Illuminator and paired with the Amplifier technology, this lens will help your eyes see every detail on the mountain.

CONEHEAD

For radial impact we have introduced Conehead Technology to our helmets. It is a unique construction that has two different densities of EPS. This increases the impact absorption of the helmet.

SAFETY AS PRIORITY

Riders experience two types of impacts – radial impacts which are impacts straight into the head and angular impacts which cause rotational violence. With the MX550 we address both by using Conehead and MIPS technologies.

MIPS

To protect the brain from rotational violence we have introduced the revolutionary MIPS brain protection system. MIPS is a low friction layer inside the helmet which allows the head to rotate relative to the helmet in an angled impact. This substantially reduces rotational violence and the potential for damage to the brain.

For radial impact we have introduced Conehead Technology to our helmets. It is a unique construction that has two different densities of EPS. This increases the impact absorption of the helmet.

To protect the brain from rotational violence we have introduced the revolutionary MIPS brain protection system. MIPS is a low friction layer inside the helmet which allows the head to rotate relative to the helmet in an angled impact. This substantially reduces rotational violence and the potential for damage to the brain.

AQUAGUARD®

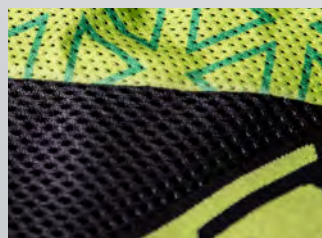

AquaGuard® is a water-repellent zipper. It is created by laminating PU on the textile tape, the PU layer is acting as a membrane. YKK's AquaGuard® items are available for a variety of functions in both Coil and Vislon®. It is the most commonly used zipper solution for quality rain and wind proof outer shell garments. Unlike standard PU coated items, the superior Aquaguard® range withstands an extensive shower test and does not absorb water.

FLEXIBLE AND BREATHABLE D3O® FOAM STRUCTURE

The new Softcon 2 uses D3O® material with a unique design that enhance flexibility allowing the protection to conform to the body and ensure a tight and consistent seal. The unique design combined with the perforation is creating a ventilation system to keep you cool.

LOW PROFILE AND INVISIBLE LOOK

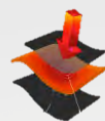

The protection is so thin that it is invisible under the jersey. Shoulder and elbow D3O® protection are specifically designed to be extremely flexible and comfortable and offer an high level of protection.

D3O® TECHNOLOGY WITH SCOTT PROTECTIVE SYSTEM

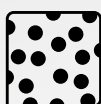

D3O® IMPACT PROTECTION TECHNOLOGY

D3O® is a unique material that focuses on energy dispersion in critical areas for maximum shock absorption and protection. The functionality of the raw material originates from the synergetic effects of the polymer-based dilatant. Energy is distributed throughout the synthetic elastomeric polymer and the enhanced chemistry continues to disperse the energy throughout the matrix, significantly reducing the effect of impact.

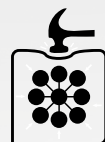

SHOCK ABSORPTION

Unique technology that focuses on energy absorption and protection.

SOFT AND FLEXIBLE

AirFlex PROTECTION WITH D3O® TECHNOLOGY

THE NEW PROTECTION STANDARD

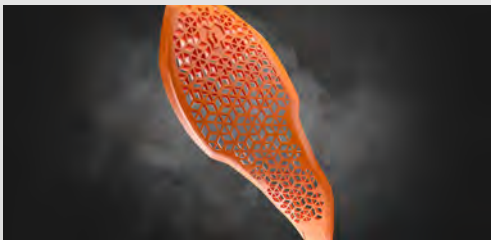

THE SAFER PROTECTION

SCOTT AirFlex protection excels with a SCOTT exclusive D3O® design that protects what matters. Improved protection along the spine with extended support in the crucial lumbar area reduces the risk of injuries by absorbing any type of impact. All of our protection are certified according to current European standards – EN 1621-2. We are proud to offer protection that goes beyond this standard and elevates your safety by covering more of your crucial body parts.

VENTILATION. MAXIMUM AIRFLOW

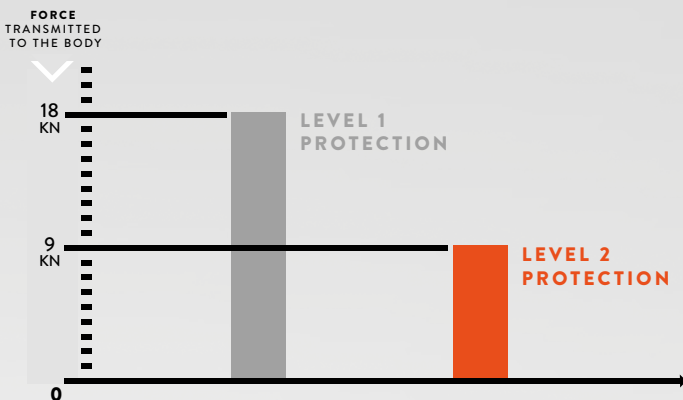

Gone are the times when back protectors were adding heat. With strategically placed air vents, AirFlex controls body temperature by allowing maximum airflow. Keep your body at the right temperature in every moment.

COMFORT THROUGH FLEXIBILITY

Performing at your best requires maximum freedom of movement. While protecting against any energy impact, AirFlex is light and follows your every movement. Soft as a marshmallow, but as hard as a diamond in case of an impact, AirFlex with D3O® feels like a second skin that adapts to your body.

LEVEL 1 & LEVEL 2 PROTECTION

LEVEL 2 PROTECTION OFFERS TWICE THE PROTECTION OF LEVEL 1

The EN 1621-2 test drops a 5kg weight on our protector from a 1m height. By measuring the residual force, we design a protector to be level 1 or level 2.

AIRFLEX – LEVEL 1 PROTECTION

Withstands 5kg impacts with no more than 18KN of force transmitted.

PERFECT FOR: Versatile skiers who seek a lightweight protector.

AIRFLEX PRO – LEVEL 2 PROTECTION

Withstands 5kg impacts with no more than 9KN of force transmitted. Level 2 protection offers twice the protection of Level 1.

PERFECT FOR: Skiers in exposed terrain seeking maximum protection.
