HAND'S LENGTH

Place your right hand as shown on the scale. Position your wrist, on the thumb side, to find the correct position. The number indicated above your middle finger hash marks reveal the length of your fingers. If your finger is in between the hash marks you should choose based on the width of your hand. The main size is the width of your hand, but if your hand is considerably longer it is best to choose the larger size.

HAND'S WIDTH

Place your right hand as shown. The lines on the left should match to your index finger and thumb. If your hand lays flat as mentioned on the scale you can read your correct size on the right side of your hand. If you're in between two sizes it's better to take the bigger one.

HELMET TECHNOLOGIES

For radial impact we have introduced Conehead Technology to our helmets. It is a unique construction that has two different densities of EPS. This increases the impact absorption of the helmet.

To protect the brain from rotational violence we have introduced the revolutionary MIPS brain protection system. MIPS is a low friction layer inside the helmet which allows the head to rotate relative to the helmet in an angled impact. This substantially reduces rotational violence and the potential for damage to the brain.
